Y4 GAMES - PROJECT

Coordinator: Martin Harrigan,
martin.harrigan@setu.ie

MODULE AIM

To provide students with practical experience of realistically sized projects;

To draw together the various elements of the course.

Note that Project is **two modules**, one in each semester, and each module is **double-weighted** (20 credits in total).

LEARNING OUTCOMES

1. Produce a fully developed game or game framework
2. Present material in a professional manner
3. Schedule and plan tasks necessary to build a game
4. Write, debug and manage code in a large code base
5. Research and solve programming problems
6. Produce high quality documentation

TIMELINE – SEMESTER 1

	Date
Information Session	**Today**
Students Submit Project Proposals Outcome: accepted, rejected, needs revision	**Deadline: Thursday, 24th Sept.**
Supervisors Allocated	
Work and meetings start!	
Semester 1 Presentation & Assessment	**Last week of lectures**

TIMELINE – SEMESTER 2

	Date
Work and meetings continue!	
Semester 2 Preliminary Presentations	Before Easter Break
Industry Showcase: https://showcase.setu.ie/	
Students Submit Code, Documentation and Screencast	
Semester 2 Final Presentations & Assessment	After Easter Break; typically during the last two weeks of lectures

THE ROLE OF THE SUPERVISOR

Support and guidance

Project monitoring

Relevant feedback

But it is your project!

MARKING SCHEME

	%
Semester 1 Presentation & Assessment	10
Research Report	5
Games Design Document (GDD) or Software Requirements Specification (SRS)	5
Technical Design Document (TDD)	5
Semester 2 Presentation (including screencast)	5
Technical Achievement	70

POLICIES

- Use GitHub to manage and share your work.
  - Regular commits.
- The submitted work must be your own.
  - No LLM generated code. No plagiarism.
- Defined Tech Stack: C++, raylib, other third-party libraries
  - Exceptions: make the case in your proposal, requires good justification
- Hand-written diary (physical notebook)
  - Periodically scanned and stored in git repository.

INTER-DEPARTMENT PROJECT

- Joint project with the Electronics department
  - Develop a novel physical interface for an interactive experience
  - Emphasis on originality, tactile engagement, and clear conceptual justification
  - e.g., a submarine shoot 'em up controlled by custom hardware where a ballast-tank was simulated with a breathing detector and squeeze grips
- Electronics student primarily responsible for hardware
- Games student primarily responsible for software
- Both agree on shared interface
